***Claim Rejections - 35 USC § 112***

6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

7. Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 uses the terms "driving" and "driven" to identify the two input pinions. This is inaccurate since both pinions input a driving force to the ring gear.

Claim 1 states that the elastic member urges the driven pinion in a direction reverse to the driving pinion. This is indefinite since figure 2 shows arrows which show that the spring biases the pinions away from each other to reduce the backlash, not rotationally biased as the claim states "direction reverse".

***Claim Rejections - 35 USC § 103***

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claim 1, as best understood, is rejected under 35 U.S.C. 103(a) as being unpatentable over Chakraborty (2004/0097322) in view of Obrist (5,492,029).

Chakraborty shows the claimed invention where two pinions (46) input to a ring gear (14), the gearing being of the hypoid type; the backlash is eliminated by axially moving one of the gears into or out of engagement with the pinion, and then the pinion is licked down.

Obrist shows the use of springs (51) in a gearing arrangement where two gears are biased by the spring which closes the backlash in the gearmesh.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the gear arrangement of Chakraborty such that a spring were used instead of the locking down of the pinion in view of the teaching of Obrist for the purpose of providing a dynamic backlash elimination device that removes backlash even as the gears wear.
